

## St Cloud Sprinkler Save

05/30/2012

On 05/30/2012 at 7:25 PM (that's when the clock melted) a single sprinkler head operated and controlled a fire that occurred in a tinting process area at a local eyeglass lens wholesaler. The fire reached temperatures over 1200 degrees and only required mop up efforts by the fire department. The plant employs 48 people and was open for business the following morning.
